

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

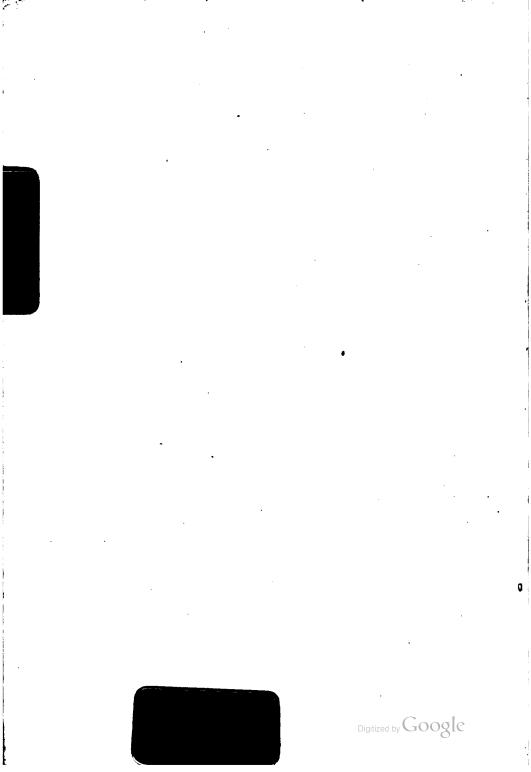

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. The substitution of y or z for x, where $y \equiv a + bx$, $z \equiv (a + bx) / x$, gives 21. $\int (a + bx)^m dx = \frac{1}{b} \int y^m dy$. 22. $\int x (a + bx)^m dx = \frac{1}{b^2} \int y^m (y - a) dy$. 23. $\int x^n (a + bx)^m dx = \frac{1}{b^{n+1}} \int y^m (y - a)^n dy$. 24. $\int \frac{x^n dx}{(a + bx)^m} = \frac{1}{b^{n+1}} \int \frac{(y - a)^n dy}{y^m}$. 25. $\int \frac{dx}{x^n (a + bx)^m} = -\frac{1}{a^{m+n-1}} \int \frac{(z - b)^{m+n-2} dz}{z^m}$.

D. --- RATIONAL FRACTIONS.

Every proper fraction can be represented by the general form:

$$\frac{f(x)}{F(x)} = \frac{g_1 x^{n-1} + g_2 x^{n-2} + g_8 x^{n-3} + \dots + g_n}{x^n + k_1 x^{n-1} + k_2 x^{n-2} + \dots + k_n}.$$

If a, b, c, etc., are the roots of the equation F(x) = 0, so that

$$F(x) = (x-a)^{p} (x-b)^{q} (x-c)^{r} \cdots,$$

RATIONAL ALGEBRAIC FUNCTIONS.

then

where the numerators of the separate fractions may be determined by the equations

$$A_{m} = \frac{\phi_{1}^{(m-1)}(a)}{(m-1)!}, \quad B_{m} = \frac{\phi_{2}^{(m-1)}(b)}{(m-1)!} \quad \text{etc., etc.}$$

$$\phi_{1}(x) = \frac{f(x)(x-a)^{p}}{F(x)}, \quad \phi_{2}(x) = \frac{f(x)(x-b)^{q}}{F(x)}, \quad \text{etc., etc.}$$

If a, b, c, etc., are single roots, then $p = q = r = \cdots = 1$, and

$$\frac{f(x)}{F(x)} = \frac{A}{x-a} + \frac{B}{x-b} + \frac{C}{x-c} \cdots$$

where

$$A = rac{f(a)}{F'(a)}, \quad B = rac{f(b)}{F'(b)}, \; ext{etc.}$$

The simpler fractions, into which the original fraction is thus divided, may be integrated by means of the formulas:

90.
$$\int \frac{h \, dx}{(mx+n)^l} = \int \frac{h \, d(mx+n)}{m \, (mx+n)^l} = \frac{h}{m \, (1-l) \, (mx+n)^{l-1}},$$

and $\int \frac{h \, dx}{mx+n} = \frac{h}{m} \log \, (mx+n).$

If any of the roots of the equation f(x) = 0 are imaginary, the parts of the integral which arise from conjugate roots can be combined and the integral brought into a real form. The following formula, in which $i = \sqrt{-1}$, is often useful in combining logarithms of conjugate complex quantities:

$$\log (x \pm yi) = \frac{1}{2} \log (x^2 + y^2) \pm i \tan^{-1} \frac{y}{x}.$$

The identities given below are sometimes convenient:

$$\frac{1}{(a+bx^2)(a'+b'x^2)} \equiv \frac{1}{a'b-ab'} \cdot \left[\frac{b}{a+bx^2} - \frac{b'}{a'+b'x^2}\right],$$

Let $X = a + bx + cx^2$, $q = 4 ac - b^2$, and $k = \frac{4c}{q}$. In order to rationalize the function $f(x, \sqrt{a + bx + cx^2})$ we may put $\sqrt{a + bx + cx^2} = \sqrt{\pm c} \sqrt{A + Bx \pm x^2}$, according as c is positive or negative, and then substitute for x a new variable z, such that

$$z = \sqrt{A + Bx + x^2} \pm x, \text{ if } c > 0.$$

$$z = \frac{\sqrt{A + Bx - x^2} - \sqrt{A}}{x}, \text{ if } c < 0 \text{ and } \frac{a}{-c} > 0.$$

A series of numbers, B_1 , B_2 , $B_3 \cdots$, of odd and even orders, which appear in the developments of many functions, may be computed by means of the equations,

$$B_{2n} - \frac{2n(2n-1)}{2!} B_{2n-2}$$

$$+ \frac{2n(2n-1)(2n-2)(2n-3)}{4!} B_{2n-4} - \cdots (-1)^n = 0.$$

is called the *functional determinant* or the *Jacobian* of the y's with respect to the x's and is denoted by the expression,

$$\frac{\partial (y_1, y_2, y_3, \cdots, y_n)}{\partial (x_1, x_2, x_3, \cdots, x_n)}, \text{ or by J } (y_1, y_2, \cdots, y_n).$$

- 873. $\frac{\partial (y_1, y_2, y_3, \cdots , y_n)}{\partial (z_1, z_2, z_3, \cdots , z_n)} \cdot \frac{\partial (z_1, z_2, z_3, \cdots , z_n)}{\partial (x_1, x_2, x_3, \cdots , x_n)} = \frac{\partial (y_1, y_2, y_3, \cdots , y_n)}{\partial (x_1, x_2, x_3, \cdots , x_n)} \cdot \cdot$

If the y's are not all independent but are connected by an equation of the form $\phi(y_1, y_2, y_3, \dots y_n) = 0$, the Jacobian of the y's with respect to the x's vanishes identically; and, conversely, if the Jacobian vanishes identically, the y's are connected by one or more relations of the above-mentioned form.

The directional derivative of any scalar point function, u, at any point, P, in any fixed direction PQ', is the limit, as PQ approaches zero, of the ratio of $u_Q - u_P$ to PQ, where Q is a point on the straight line PQ' between P and Q'. The gradient, h_u , of the function u at P is the directional derivative of u at P taken in the direction in which u increases most rapidly. This direction is normal to the surface of constant u which passes through P.

874. $h_u^2 \equiv (D_x u)^2 + (D_y u)^2 + (D_z u)^2$.

The directional derivative of any scalar point function at any point in any given direction is evidently equal to the product of the gradient and the cosine of the angle between the given direction and that in which the function increases most rapidly.

AUXILIARY FORMULAS.

The normal derivative, at any point, P, of a point function u, taken with respect to another point function v, is the limit as PQ approaches zero of the ratio of $u_Q - u_P$ to $v_Q - v_P$, where Q is a point so chosen on the normal at P of the surface of constant v which passes through P, that $v_Q - v_P$ is positive. If (u, v) denotes the angle between the directions in which u and v increase most rapidly, the normal derivatives of u with respect to v, and of v with respect to u may be written

 $h_u \cos(u, v) \div h_v$, and $h_v \cdot \cos(u, v) \div h_u$

respectively. If $h_u = h_v$, these derivatives are equal.

For values of x greater than 7.0, we may write, to five places of decimals at least,

 $\log_{10} \sinh x = \log_{10} \cosh x = \log_{\frac{1}{2}} e^x = x (0.4342945) + \overline{1.6989700}.$
